About

Export & Retention

Exports remain under ~/Library/Application Support/ShieldBot(exports) and include a per-file SHA-256 manifest and local receipt.

Create redacted local evidence export

- Evidence retention
- Snapshot retention
- Action retention
- Automatic deletion

Purge requires exact typed confirmation and a sealed receipt. No automatic retention deletion occurs.

Propose Evidence Journal purge

CONFIRM PURGE-42a5f3d2103bf88584a EVIDENCE_JOURNAL

Type the exact confirmation

Confirm sealed-receipt purge

About

ShieldBot Mac — MirrorWatch 0.4.0

Personal, local-only defensive software. Observation is the default; controlled actions require exact user authorization and identity preflight.

Account Sentinel provider integration is DEFERRED. This build does not claim antivirus certification, complete intrusion prevention, or proof that anyone targeted this Mac.

PROMPT 4 · NON-RELEASE

Boundary

Observation remains the default. Containment is human-approved, reversible where supported, and DRY_RUN by default. Exports and notifications stay local. No force kill, silent deletion, network mutation, permission revocation, keystroke monitoring, password collection, automatic repair, remote control, or telemetry.
