

LOCAL EVIDENCE / PUBLIC-SAFE EDITION

LAW Local

A Public-Safe Visual Archive

A restrained record of local product surfaces, fixture states, and workflow boundaries found in accessible LAW Local work.

A visual index of the local LAW Local surface

This book collects only accessible, public-safe visual evidence associated with the local LAW Local / BriefWise work. It is meant to make the visible product language easy to inspect without exposing private legal material or implementation details.

PUBLIC-SAFE BOUNDARY

The screenshots are synthetic, fixture-rendered, QA, or already public-safe artifacts. They do not prove legal correctness, production readiness, live provider execution, filing readiness, or real-world outcomes.

No live production capture is claimed; the selected image provenance and limits are recorded in the audit note.

The archive is intentionally short on prose. The product visuals carry the history; the manifest and audit note carry the provenance and limits.

Contents

Sections are arranged from core workspace surfaces to evidence controls and related product areas.

01	BriefWise - workspace foundation	3 visuals / p. 4
02	Evidence, audit & release gates	2 visuals / p. 8
03	VerdictBridge - litigation-record workbench	3 visuals / p. 11

Asset-level captions, source family, safety status, and limitations are recorded in image-manifest.csv.

01

SECTION

BriefWise - workspace foundation

The local drafting and matter workspace surface, shown through synthetic chat, matter context, source, controlled-export, and audit states.

COVERAGE

5 screenshots: chat landing, matter context, sources, controlled export, and audit replay.

PROVENANCE

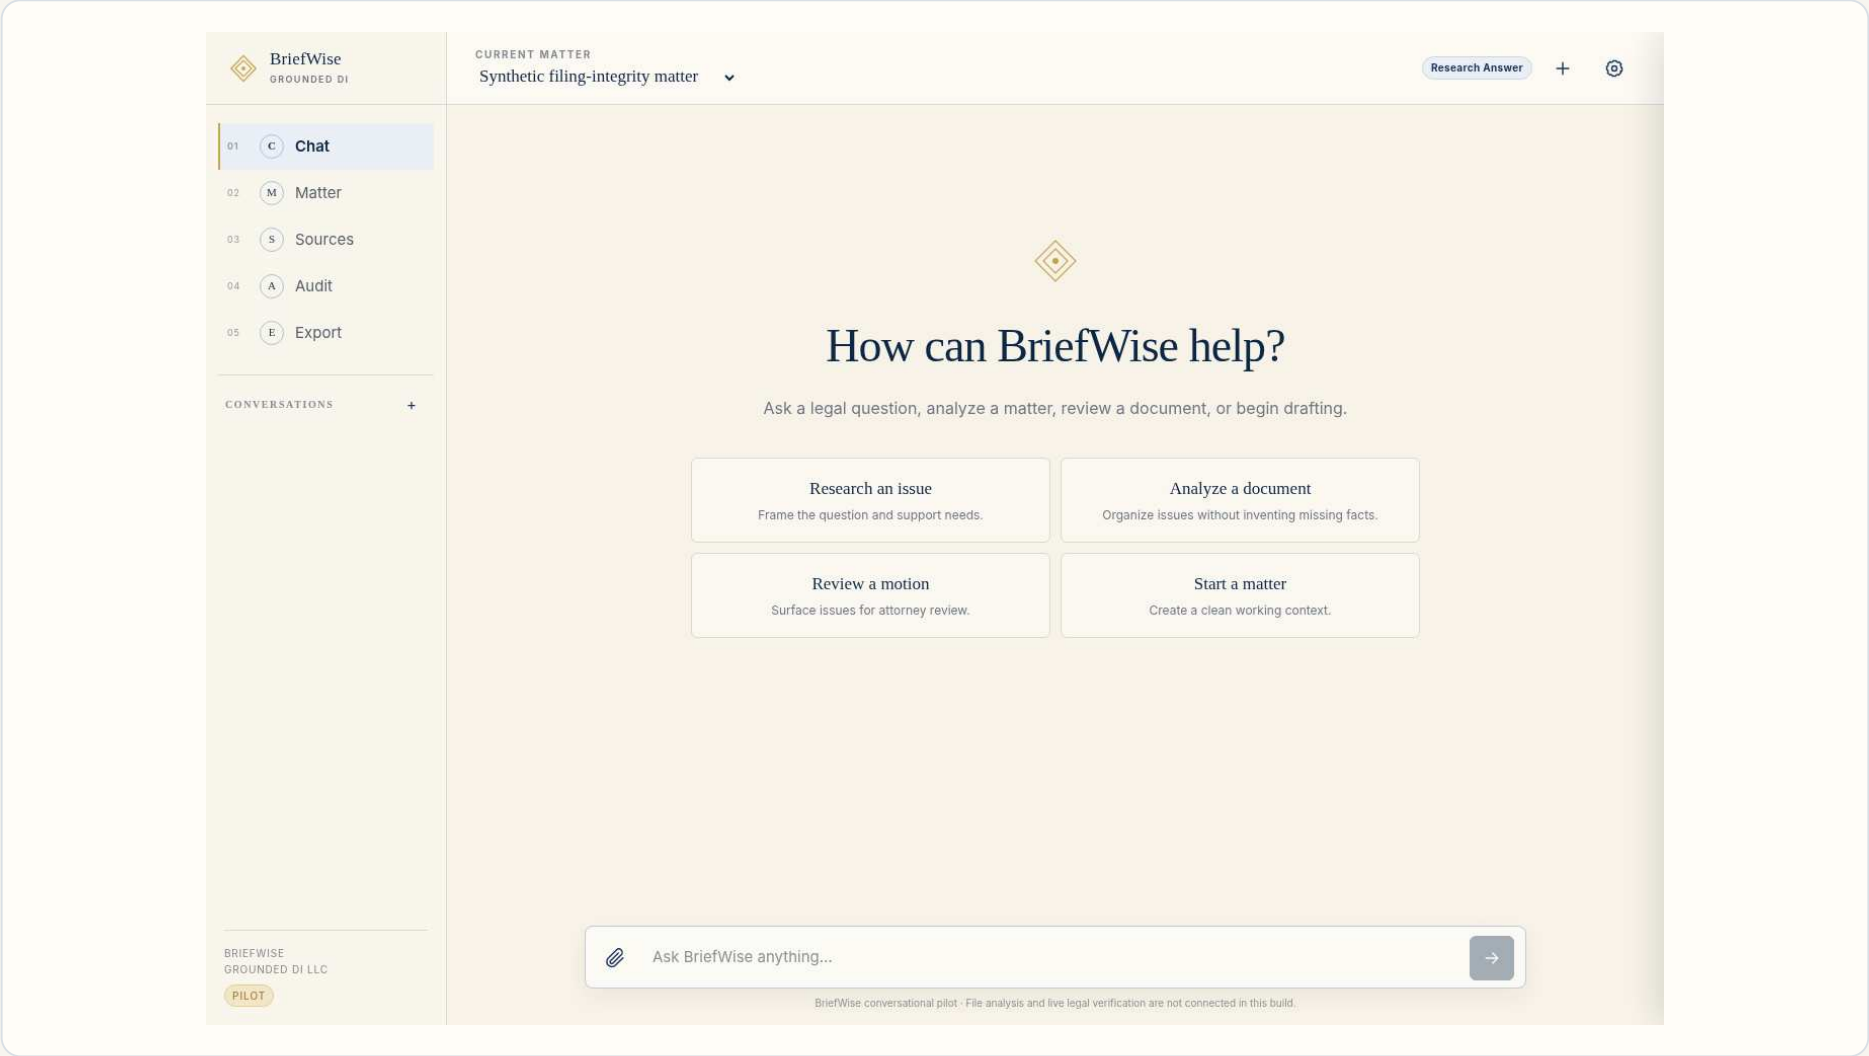

Existing QA renders from the Law Local 3 / BriefWise 6.22 local screenshot set.

LIMITATION

Fixture rendering only. The images do not establish live provider or database execution, legal correctness, or filing readiness.

01 / VISUAL 01 OF 08

BriefWise chat landing surface for a synthetic filing-integrity matter.

EXISTING QA RENDER Law Local 3 / BriefWise 6.22 local QA screenshot set

PUBLIC-SAFETY NOTE: included — synthetic/public-safe. Fixture rendering; not live provider or legal validation.

01 / VISUAL 02 OF 08

Sources view with fixture file and authority rows.

Controlled export view with review-required and held states.

EXISTING QA RENDER Law Local 3 / BriefWise 6.22 local QA screenshot set

PUBLIC-SAFETY NOTE: included — synthetic/public-safe. State presentation only; not filing readiness or production authorization.

02

SECTION

Evidence, audit & release gates

A compact view of visible review-required, replay-pass, and source-empty states in the local workbench.

COVERAGE

3 screenshots: review-required audit, replay-pass fixture, and source-empty state.

PROVENANCE

Existing QA renders from the Law Local 3 / BriefWise 6.22 local screenshot set.

LIMITATION

These are state presentations. They do not prove completed human review, substantive accuracy, or release authorization.

Audit view showing a sealed replay-pass fixture.

03

SECTION

VerdictBridge - litigation-record workbench

A related local workbench for record sufficiency, support mapping, qualitative exposure views, unresolved gates, and controlled handoff.

COVERAGE

5 screenshots: landing, record support, risk matrix, held assessment, and BriefWise handoff.

PROVENANCE

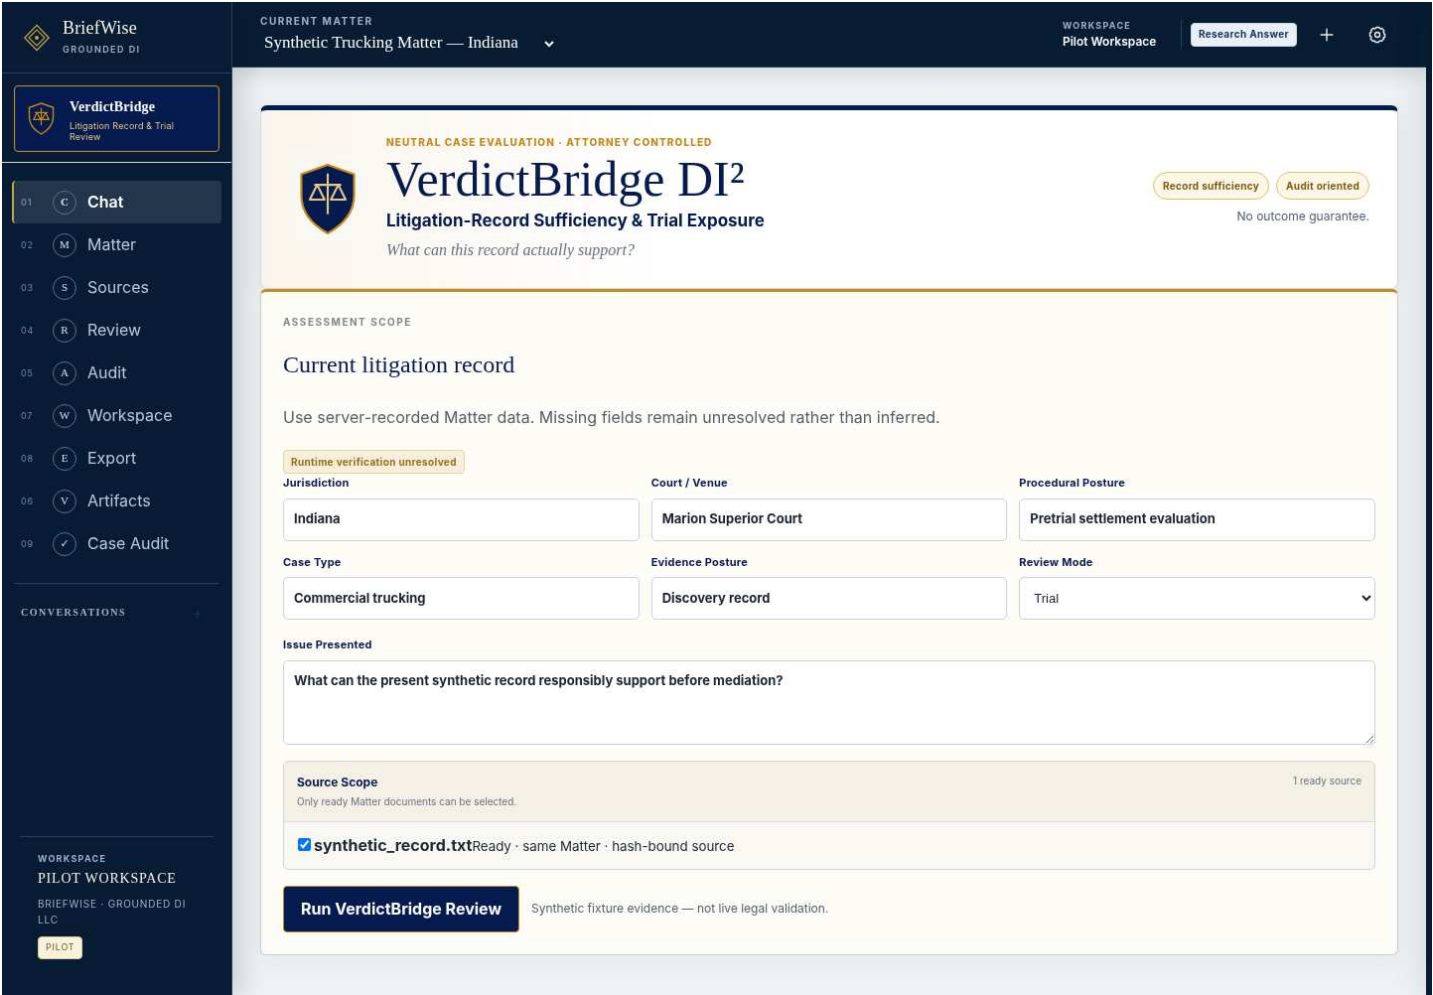

Existing synthetic fixture renders documented by the VerdictBridge 6.22 screenshot index.

LIMITATION

Synthetic fixture presentation only. It is not verdict prediction, legal advice, filing authorization, or a real case outcome.

JURISDICTION Indiana	COURT / VENUE Marion Superior Court	PROCEDURAL POSTURE Pretrial settlement evaluation	CASE TYPE Commercial trucking
EVIDENCE POSTURE Discovery record	REVIEW MODE Trial	ISSUE PRESENTED What can the present synthetic record responsibly support before mediation?	SOURCE SCOPE synthetic_record.txt · 1 ready source

PRELIMINARY RESULT

Useful internal analysis is available, but material evidence, expert, authority, and instruction predicates remain unresolved.

VERDICTREADY
Not yet determinable

FILINGREADY
Not applicable

EXPORT
Held

VerdictReady cannot be confirmed because required verification is incomplete.

GATEKEEPER FINDINGS

Runtime	UNRESOLVED — runtime verification required
Input normalization	PASS — supplied fixture fields normalized
Contradiction	REVIEW REQUIRED — competing speed testimony preserved
Evidence admissibility	UNRESOLVED — expert foundation and exhibits require review
Authority / fact support	UNRESOLVED — controlling authority required
Claim / defense elements	PARTIAL — comparative-fault support remains disputed
Standard alignment	UNRESOLVED — procedural standard requires verification
Damages	HELD — future care and earning capacity predicates incomplete
Jury instructions	UNRESOLVED — instruction mapping required
Appellate record	NOT EVALUATED in current trial review
Replay / audit	Not executed — separate from substantive sufficiency
Export	HELD — attorney review required

PUBLIC-SAFETY NOTE: included — synthetic/public-safe. Held/unknown state is intentional; no filing readiness is asserted.

PUBLIC-SAFE VISUAL ARCHIVE / SEE MANIFEST FOR PROVENANCE

14 / 16

Inventory of visual evidence found

The archive contains only the strongest accessible public-safe visuals selected from the local search. Counts below are image counts, not product completeness claims.

BriefWise - workspace foundation	3 visuals
Evidence, audit & release gates	2 visuals
VerdictBridge - litigation-record workbench	3 visuals

Total included: 8 screenshots across 3 named LAW Local product/workflow areas.

The per-image manifest is the authoritative list for filenames, source families, captions, public-safety status, and limitations.

Not included

The search found more material than belongs in a public visual archive. The following categories were deliberately left out.

- Private environment files, credential references, API-key paths, database configuration, internal URLs, and implementation packages.
- Real or potentially identifying legal material, client documents, raw source files, confidential records, and personal contact information.
- Unrelated products and artifacts, including games, weather/hazard visuals, and general Grounded DI materials that were not clearly part of LAW Local.
- Duplicate historical or less-legible mobile captures, raw logs, JSON/test evidence, and product areas without strong public-safe visuals.
- PIDBot and other areas without an accessible, publishable screenshot set; these are not silently represented.

FINAL STATUS: PASS FOR PUBLIC-SAFE ARCHIVE REVIEW

The package is intentionally limited to the curated public-safe visual scope. This status applies to the archive artifact only; it is not a release, legal-quality, or production-readiness decision.
